

Luis Meyehen Paz

Cloud & Data Platform Engineer

Buenos Aires, Argentina · Remote · luis.m.paz.03@gmail.com · linkedin.com/in/luisarg03 · github.com/luisarg03 · luisarg03.github.io

SUMMARY

Cloud & Data Platform Engineer with 7+ years on AWS. Day to day I build and operate data platforms and pipelines, automate the repetitive work, and keep what I ship running. The same curiosity drives what I build for myself: multi-agent tooling, CLI automation, and a personal knowledge base.

EXPERIENCE

Cloud Engineer

Interbank · Peru · Remote, Contract via DATalent · 10/2023 – Present

- MLE Platform team (8 engineers + 1 lead), supporting 15+ Data Scientists.
- Build and operate the analytical base table (ABT) pipeline end to end: LLM-orchestrated generation with a model registry and provider fallbacks, plus Python modules that generate SQL materialized in the data lake for self-service analytics.
- Own data quality, drift detection and pipeline monitoring across the platform, plus the variable catalog (Python API + web UI).
- Ship CI/CD templates for Data Science teams with GitHub Actions and Bitbucket.
- Refactor the data pipelines into reproducible infrastructure as code, including ML feature-store workflows.

Data Engineer

Prisma Medios de Pago · Argentina · 08/2022 – 10/2023

- Migrated the data lake platform to Terraform, replacing legacy infrastructure code with reproducible deployments across environments.
- Built event-driven ingestion into the data lake from on-premise mainframe systems and Salesforce, with data quality checks and monitoring.
- Shipped through GitLab CI/CD, integrating platform and data components.

Data Engineer

Tiendanube · Argentina · 10/2021 – 08/2022

- Built batch ETL pipelines with Airflow orchestration and Databricks (PySpark) processing, landing curated data in the lakehouse and warehouse.
- Contributed to the lakehouse architecture in a 4-person data team, exposing curated datasets for SQL self-service through Trino.
- Developed and maintained the ingestion pipelines feeding analytics and BI.

Data Engineer

Walmart / Dorinka · Argentina · 02/2021 – 10/2021

- Migrated databases to Oracle Cloud, redesigning schemas as dimensional models and validating data integrity during the Walmart Argentina to Dorinka transition.
- Decommissioned legacy database servers after cutover.

Data Engineer

Tsoft / Monsun / Dthink · Argentina · 06/2019 – 02/2021

- Tsoft (DirectTV): automated ingestion and transformation from external APIs with Python.
- Monsun (Banco Supervielle, AGIP): built and tested predictive models and SQL on SQL Server; automated ETL processes.
- Dthink (Hendel Hogar, Secretaria de Salud, Wunderman Thompson): built SQL Server and Oracle databases with dimensional (star schema) models, ETL processes and Tableau dashboards used by clients.

TECHNICAL SKILLS

Cloud & IaC: AWS, Infrastructure as Code (Terraform, AWS CDK, CloudFormation), IAM, Lambda, Step Functions, Glue, Athena, S3, EMR, ECS, ECR, DynamoDB, SageMaker, Docker

Data Engineering: ETL/ELT, SQL, Python (Pandas, NumPy, Jupyter), PySpark, Spark, Databricks, Airflow, Trino, Redshift, Data Lake & Lakehouse, Dimensional Modeling (Star Schema, SCD), Data Quality, Pipeline Orchestration, SSIS, Pentaho

Databases: SQL Server, Oracle, PostgreSQL, MySQL, Athena, Redshift, BigQuery

BI & Analytics: Tableau, Power BI, Metabase

CI/CD & DevOps: GitHub Actions, GitLab CI/CD, Bitbucket Pipelines, CodePipeline, CodeBuild, Git, Linux

Platform Engineering: Internal Developer Platforms, Observability, Monitoring, Drift Detection, Developer Enablement

AI Tooling: LangGraph, Agent Orchestration, AWS Bedrock, OpenAI APIs

OPEN SOURCE

Maintainer of DeepSeek Harness plugins — MIT-licensed @luisarg/* plugins on npm, listed in awesome-dsh-plugin.

EDUCATION & CERTIFICATIONS

AWS Certified DevOps Engineer Professional (DOP-C02) — In progress

Computer Technician — Sec. Técnica N3 · Buenos Aires

Languages: Spanish — Native · English — Intermediate reading, basic writing/speaking — code and docs in English
